

BCRAGD

PUBLIC SERVICE ANNOUNCEMENT:

Surface Water Staff from the Bandera County River Authority and Groundwater District collected water samples from sites along the Medina River, Medina Lake, Sabinal River, and their tributaries to assess levels of E. coli bacteria on **August 12, 2026.**

E. coli is a bacteria found in the gut of warm-blooded animals and is known to potentially cause illness in humans if ingested. No primary contact recreation should take place if the number of E. coli exceeds 399 most probable number (MPN) per 100 mL of water. This standard is set by the Texas Commission on Environmental Quality (TCEQ) in the Texas Administrative Code (30 TAC §307.7). This means that no one should participate in activities that could result in the total submersion of the head underwater if counts exceed the 399 MPN standard.

There is ALWAYS a possibility of infection from E. coli or other waterborne illnesses. Never drink or ingest river water without proper disinfection; always swim at your own risk.

MEDINA RIVER & SABINAL RIVER E. COLI COUNTS AUGUST 12, 2026

Interactive Map of locations sampled, current E.coli count, temperature, water level, and current photo located at <https://www.bcragd.org/water-quality-testing/>
